Care and Maintenance

Why Choose Artificial Plants?

There are many factors into deciding why artificial plants are more suitable than live plants when planning your next project.

Maintenance

Artificial plants require minimal attention. A light dusting with either a dry cloth or duster will take care of any dust that may gather on leaves like any live plant or alternatively if your outdoor plants are very dirty, simply hose them down. This can be easily managed as part of a cleaners normal routine.

Live plants require regular maintenance with watering, feeding, trimming and often replacing plants when they die due to lack of sunlight or care. This can often be a very expensive ongoing process.

Health and Safety

It is always important when using live plants that the plants chosen are not poisonous as often a curious toddler can grab a brightly coloured leaf and eat it, which may cause mild discomfort to serious illness. Many varieties of plants used as decorative features, like the Calla Lily and Mother In Law's Tongue are poisonous if ingested.

Artificial plants are non-toxic, whilst not edible, if they are eaten they are often tasteless and difficult to chew so provide an unappetising yet safe alternative to decorative green features.

Bugs and Disease

Self watering planters can often become targets of Fruit Flies and create an unsightly and annoying by-product of using live plants. Fruit Flies can be incredibly difficult to get rid of once an infestation occurs, often results in having to discard the entire planting systems.

Damp soil and rotting vegetation from live plants are often the breeding ground for mould and mildew and generate a very musty smell that can be offensive to people that are sensitive to strong odours.

All our artificial plants are potted using material that is mould and mildew free, produces no smell or is a breeding ground for fruit flies.

Our high-quality artificial plants remain beautiful all year round, in any weather.

PLANT VISION

Note: This document does not contain an exhaustive list of care and maintenance instructions but provides a general guide for most products from Plant Vision. Before any cleaning is undertaken ALWAYS spot test beforehand and if unsure please contact Plant Vision directly before cleaning.

All artificial plants should be used in the way it is intended. DO NOT exceed weight limits. Commercial Warranty covers all goods against faulty materials and/or workmanship for a period of 2 Years from the delivery date of the artificial plants, unless noted otherwise.
